## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. §102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 7 is rejected under 35 U.S.C. §102(b) as being clearly anticipated by Figure 9 of this application identified by applicant as prior art with the description on page 10, ¶3, lines 1-3.

Figure 9 of this application teaches an air/water tight slide fastener with a pair of stringers wherein as indicated on page 10, ¶3, lines 1-3 the construction of the fastener elements, the U-shaped clamping element and slider are conventional and the end stop includes a flange portion 14b extending around the around the block. The flange portion extends extensively around the block enough to be integrally fixed to the opening edges of the article if so desired. While claim 7 indicates that “at least part of the flange portion be extensive enough to be integrally fixed to the opening edges of the article”, this limitation is only a statement of intended use and does not claim the article in combination.

### *Response to Arguments*

Applicant's argument with respect to the rejection of claims 1-6 based on Figure 9 of this application identified by applicant as prior art with the description on page 10, ¶3, lines 1-3 has been overcome by applicant's argument found in the response submitted August 31, 2005 on page 5, ¶7 through page 8, ¶2, the first full paragraph. Applicant cites the allowable feature “at least part of the flange portion be extensive enough to be integrally fixed to the opening edges of

Art Unit: 3677

the article". Specific attention is drawn to the sentence "Particularly, the limitation defines the structural or positional feature of the amount of extension of the flange portion relative to the opening edges of the article". This statement is persuasive in demonstrating that claim 1 is drawn to the combination with the article as further indicated in claim 1 by "the fastener tapes being mounted along the opposed edges of the opening on the rear side of the article". This results in the benefits provided by applicant in page 6 of the response submitted August 31, 2005 in the first full paragraph and is persuasive in withdrawing the rejection.

To the contrary with respect to claim 7, the arguments are not persuasive because the pertinent language of claim 7 has been changed from that of claim 1 so that it is purely a statement of intended use and the device identified as Prior Art is capable of being used in such a manner.

### *Conclusion*

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 3677

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
